CHAPTER I

Introduction and Methodology

Introduction and Methodology

1. Introduction

The research conducted on public financing of education, at federal, provincial and district levels, informs that budgets are managed and utilized ineffectively mainly because they are often delinked from the actual needs demonstrated by education data.¹ Disconnect between available government data and resource allocation ultimately leads to mismatch between actual needs of the sector and priorities set in the budget especially at district level. This mismatch results in inequitable distribution and ineffective utilization of resources.

In this context, Institute of Social and Policy Sciences (I-SAPS) has developed District Education Plan (DEP) for Rahim Yar Khan (RYK) using Minimum Standards Planning (MSP) technique. The plan is envisaged to serve as a tool for evidence and research-based planning and budgeting at district level. It will help ensure effective utilization of available financial resources to improve education indicators in the district. DEP has been prepared under the project titled “*Improving Access to and Quality of Education through Political Voice at District and Constituency Levels*”. The project is being implemented with the assistance of ‘Ilm Ideas Education Voice and Accountability Fund’. It aims to promote increased role of political leadership for greater accountability and transparency in the education sector in the district thus contributing towards improved education governance and service delivery.

1.1 Setting the Context

An overview of Pakistan’s education system and its education statistics highlight that the country still faces large number of issues in the education sector and there is huge potential for education development in the country. System of Education in Pakistan faces low participation and retention rates especially for females, and learning outcomes of the students are disappointing.² According to a report published by the Pakistan Education Task Force in 2011, roughly one in every ten children who are out of primary school worldwide lives in Pakistan, placing the country second in the global ranking of out-of-school children.³ According to UNESCO Institute of Statistics, nearly 12 million children are not attending primary and lower secondary schools in Pakistan.

Keeping in view the situation of education, when one takes a look at the role of the Government, it is evident that education has remained higher on Government’s priority in Pakistan since independence and has also been acknowledged as a basic human right in all constitutions of Pakistan. With insertion of Article 25-A in the eighteenth constitutional amendment, free and compulsory education for children of 5-16 years of age group has been accepted as a statutory fundamental right. Pakistan has also participated

in various regional and international forums and agreed upon the development initiatives to improve the provision of education in the country. A number of policies, plans and strategies have also been developed and are being implemented at various levels. In addition, Federal, Provincial and District Governments spend huge amounts of money every year in the development and non-development heads on the education sector. Despite these initiatives and investments, why education sector has not yielded the desired outcomes and what needs to be done are two important questions that need to be answered.

There are a number of reasons that continuously contribute to the low ranking of the country on education indicators. A growing evidence suggests that it is essential to intervene at service delivery level in order to improve access and quality of education at national level. District education administration is the unit directly responsible for improvement of access to and quality of education at service delivery level in all regions of Pakistan. This devolved administrative set-up is directly linked to the schools in their jurisdiction however they lack proper communication mechanisms to convey the needs of individual schools in a timely manner. On the other hand, information systems and databases are available at the provincial level that can inform about challenges faced by the schools of each district. However, usually during annual planning and budgeting at district level these information systems and data sets are hardly utilized to identify needs and set targets to address these needs in a strategic manner. As a result of this missing link between needs and targets the challenges faced by a district remain partially or completely unaddressed despite planning and budgeting over the years. At district level, incremental budgeting is often carried out on annual basis and the development schemes are approved and implemented under political influence without providing any evidence for the need of a particular scheme.

Various research studies inform that strong linkages between policy, planning and budgeting are essential for effective and efficient utilization of limited resources at national, provincial and district levels.⁴ With meager resources at their disposal for education sector, the management at district level faces the challenge of weighing up various needs and deciding how to allocate the available resources in most effective manner. Challenge faced by district management is to maintain a balance between "needs" and "availabilities" more effectively. During this process, on one hand the finance departments at district and provincial levels stress upon the "availability" (the revenues it expects to be forthcoming), whereas education and other departments persist on preparing budget proposals based upon "needs" (identified through data-sets). This strife between needs and availabilities results in negative-sum budget process that undermines effectiveness of resource planning and budget utilization.

This highlights the need for developing a system that creates organic connections between education data, policy priorities and available finances. The organic connection between policy, planning and budgeting processes is fundamentally about having programs and interventions that are driven by policy priorities and disciplined by budget realities. In the above context, I-SAPS has developed this five-year Education Plan for District Rahim Yar Khan. The plan has been prepared using Minimum Standards Planning (MSP) technique which helps create the desired organic connection between data-based needs, policy priorities and available resources. The Plan identifies the issues and challenges faced by the district

⁴ For reference see studies conducted by Institute of Social and Policy Sciences (I-SAPS), 2011 and 2012. Islamabad.; Oxfam & I-SAPS, 2010.; Renzio, Paolo de and Samantha Smith, (June, 2005), *Linking Policies and Budgets: Implementing Medium Term Expenditure Frameworks in a PRSP Context*, Briefing Paper, Overseas Development Institute (ODI), London; and The World Bank, (1998), *Public Expenditure Management Handbook*, Washington DC – Accessible at: <http://www1.worldbank.org/publicsector/pe/handbook/pem98.pdf>

regarding access to and quality of education. It aims to facilitate that all children of school going age in District Rahim Yar Khan have improved access to quality education. The plan identifies the needs of the individual schools, prioritizes these needs against a certain criterion and sets the targets for the District Government so that they are able to address the challenges over a specific period of time.

1.2 District Education Plan (DEP)

Education planning is the process of making decisions and plans, involving aims and objectives, realistic targets, and resources required to achieve the objectives of the plan, ultimately contributing to development of education sector. Generally, education plans around the world include data-based needs to be addressed and timeline in which they should be completed in order to achieve a given end. The instrument of education planning is important as it helps focus on education policies and their implementation through evidence- and research-based planning and budgeting, maximum resources mobilization and their effective utilization. However, in Pakistan, situation is quite opposite largely owing to disconnect between policies, data needs, and financing.

Realizing the importance of education, the Federal and Provincial Governments have introduced number of education policies and plans in the past. However, outcome of these initiatives did not yield the desired results due to weak implementation mechanisms, lack of political will and deficiencies in the planning process. The District Education Plans (DEPs) earlier prepared by district education managers and various local organizations were more like wish list having little or no link to the available financial space within the district. With insertion of Article 25-A in the Constitution of Pakistan provinces are challenged, and so are districts, to undertake their own comprehensive planning and target to provide free and compulsory education to all children of 5-16 years in Pakistan.

In this context, cautious preparation of DEPs, with accurate and carefully collected data and budget information, is vital as it will eventually feed into Provincial Education Plan (PEP). Thus, contributing to the achievement of education targets at provincial and national levels. Considering significance of research-based DEP, I-SAPS has prepared plans for Rahim Yar Khan, Lodhran and Muzaffargarh. These plans are different than the earlier work done in Pakistan as they set to assess and address the gravity of issues in education sector of each district by using Minimum Standards Plan (MSP). Details about the concept and methodology of MSP are provided in the following sections of this DEP.

The plan at hand has been prepared for district Rahim Yar Khan. It envisages materializing the commitments made by the government through a research-based planning and budgeting exercise for next five-years. Keeping in view the government's policy for promoting girls' education, priority list of schools in this plan has been prepared for provision of classrooms, basic facilities and other infrastructure to girls' schools first. Basic idea behind preparation of this plan is to promote needs-based and decentralized planning instead of making decisions on political basis or a wish-list of various stakeholders. In this plan financial cost of achieving the targets has also been worked out on yearly-basis.

1.3 Methodology for Preparing DEP

For the purpose of this planning document an EMIS based district education planning and budgeting exercise was carried out. The Plan was prepared to set year-wise targets for increasing access and quality

of education. The plan was prepared after conducting situation analysis of district on various education indicators and resources. A comprehensive review of the secondary information and data gathered from government sources was carried out. Main data sources reviewed and used for analysis include: District education budget books of the District Rahim Yar Khan; data available with the Program Management and Implementation Unit (PMIU), Punjab; Pakistan Social and Living Standards Measurement Survey (PSLM) data; National Education Census (NEC) 2005; and data collected from District Education Department.

In addition to the situation analysis, the team adopted a consultative process to identify priorities and to set the targets for the education plan of the district. Individual meetings and briefings were also held with key stakeholders of education services which included but were not limited to District education managers, school council members, representatives of citizen groups, officials of civil society groups and bar council members. Perspectives and preferences of these stakeholders were collected to identify priorities and set targets for the district.

Other than individual meetings, a visioning/consultation exercise with the key stakeholders was also carried out after completing the situation analysis. Following were invited in this consultation exercise:

- District Education Department officials.
- Members of school councils.
- Bar council members.
- Civil society groups.
- Other development partners working on education issues in the District.

Key findings of the situation analysis were shared during stakeholders' consultation and the participants were asked to prioritize the targets to be included in the DEP.

Following the completion of the situation analysis and taking inputs from the stakeholders, education plan was developed. This plan is different from other education plans developed in Pakistan as this assesses the gravity of issues in education sector of the District and conducts planning using Minimum Standards Plan (MSP) tool (methodology explained in the next section). The plan sets yearly targets for the districts taking into account the policy priorities and decisions of the government besides considering available resource limit.

1.4 Audience of the District Education Plan

The main audience of this plan is the District Education Department, Rahim Yar Khan and the same is mainly responsible for its implementation. DEP is a planning tool and the district government can update this on annual basis. Monitoring and evaluation role while implementing the plan can be performed by the District Monitoring Officer (DMO) and PMIU. Other main audiences of the plan include:

- **Political Leadership:** who can use the evidence provided in education plan for prioritizing the investment of resources in the most deprived schools and areas of the District. They can also use the plan to assess and monitor performance of the District Education Management.

- **Other Development Partners working in the District:** Development partners working at the local levels in the District, for example National Commission for Human Development (NCHD), donors and INGOs can use the plan for synchronizing their interventions and investments thus ensuring aid effectiveness.
- **Parents and Citizens:** Local communities by using the evidence provided in this plan can raise their voices to improve the education budgeting and service delivery. They can also use the plan to track the budget allocations and utilizations. Besides, the targets set in the plan will help ensure transparency and accountability in the system.
- **Civil Society Organizations:** CSOs can work with the District Government to mobilize communities and to bring out of school children into the education system. They can also use the plan to assess and monitor performance of the District Education Management besides tracking budget allocation and utilization at district level.

1.5 Limitations of the Plan

The plan aims to address the issues that fall within the jurisdiction of the District Education Management and where the District Government can directly influence and take actions to improve access to and quality of education. It does not include targets and agenda regarding the areas and sub-sectors such as curriculum, teacher training and medium of instruction, etc. that are not within the control and responsibilities of the District Education Management.

1.6 Scheme of the Plan

There are four sections in the plan. First section introduces the plan and briefly explains the background and the process of developing the plan. Section two explains the Minimum Standards Planning concept and detailed approach and methodology adopted for setting targets for the District. Section three provides detailed situation analysis of District Rahim Yar Khan whereas the last section, i.e., section four, sets the five year targets and related planning for District Rahim Yar Khan using MSP.

CHAPTER 2

Minimum Standards
Planning (MSP):
Concept and
Methodology

Minimum Standards Planning (MSP): Concept and Methodology

Planning is a basic management function which has been defined as a process involving formulation of action agenda to achieve optimum balance of needs and demands with the available resources.⁵ The process involves identification of needs and goals, formulating strategies and allocating resources to achieve the targets in a strategic manner. In education sector, like many other sectors in the country, planning is carried out at national, provincial and district levels. District education planning is called devolved planning or bottom up planning as ideally it emerges from bottom and engages individuals and organizations at grass-root levels in preparation of agenda for education development.

Generally around the world, education planning at devolved level is considered a participatory process, as it ensures public participation in decision making and creates sense of belonging for the plan in local people and society, which contributes to the successful implementation of the plan. On the contrary, in Pakistan devolved education planning is not a participatory process. District Education Plans (DEPs) are usually prepared by the district education managers without any involvement of or contribution from the stakeholders. The plans are also devoid of connection with the data-based needs of education sector.

It is important to note that there are two major challenges with regard to school and district level planning and budgeting experimented by development partners in Pakistan. In the first case where government has set specifications and standards for setting-up a primary and secondary school it becomes highly difficult to identify and address varying needs of each school and region. Earlier research in this regard informs that standard package of establishing a school results in inefficiencies and lack of rationalization as it neither provides solutions for schools requiring additional resources nor gives an alternate plan for schools with low enrolment.⁶

In contrast to the standard package suggested by the government, the development partners have also applied a strategy of bottom up planning through School Based Budgeting (SBB) and School Development Plans (SDPs). SDPs are prepared at school level which inform about all needs of the respective schools. It is envisaged that the needs identified in SDPs of each school would be aggregated at district level and then resources would be allocated to all schools accordingly. But this in reality aggravates challenges for the district management, who are already constrained by the meager financial resources available at hand. Since this planning lacks coherence and consultation therefore it results in a long wish list coming from schools without considering available resource envelope. As a result the district education management is challenged to maintain balance between needs/wish list of schools and available budgets. In the context of Pakistan, SDPs and SBB is considered as unrealistic and impractical planning and budgeting exercise because it does not gel well with the existing district level education planning and budgeting system.

In order to improve education planning and budgeting process especially at district level in Pakistan, Minimum Standards Planning (MSP) can be employed as an effective tool. MSP is based on the concept of effectiveness to be gained by strengthening linkages between education data, policy and financing.

⁵ <http://www.businessdictionary.com/definition/planning.html#ixzz2icelyLnM>

⁶ Mitchell, Jonathan. (January 2008). *How Information-Based Planning can flourish Where traditional Politics Reign: An Example from Pakistan*. Journal of Education for International Development, 3:2.

Concept of MSP along with its objectives, significance, processes and step by step methodology are discussed in detail in this chapter.

2.1 Conceptual Understanding

Minimum Standards Planning is a tool used for defining minimum standards and setting realistic targets to be achieved in a certain timeframe keeping in view the baseline data. As regards education sector, the planning is generally done to increase access to education, reduce gender gaps, and promote quality education by engaging community members, school teachers, district education officials, etc. Moreover, it can also be used to achieve the policy targets set by government in a specific legislation.

MSP is used to develop viable education reform agenda by creating organic connections between education data, policy and budgeting so that they support each other and help address most pressing needs of the education system on priority basis. A district education plan based on MSP is fundamentally about having a reform agenda that is driven by policy priorities⁷ of the government, aligned with data-based needs of the sector and disciplined by budget realities of the district.

Under MSP resources are calculated on the basis of actual needs of schools coming from education information systems and data-sets of the government which are then aggregated at the district level. Such approach is in line with the planning processes of the government and puts a demand for transparent allocation and utilization of resources. MSP is employed with an aim to produce technically sound and politically owned education reform agenda in a given district. Since the priorities and targets set using MSP are linked to the policy priorities, they dovetail with the on-going reform agenda of the provinces and districts. The policy priorities and reform agenda of the government serve as a coordinating vector to rally the support of all relevant stakeholders for evidence based education planning using MSP tool. After identifying issues and needs of schools, a consultative process is conducted to prioritize needs, set targets and allocate resource against minimum standards. The minimum standards of provisions to schools are determined on the basis of national standards determined and approved by the government.

2.2 Significance of MSP Tool

Importance of minimum standards planning cannot be overlooked in order to achieve targets (short-term, medium-term, and long-term) set by any government/organization in any sector. Inadequate access, poor quality of education, and gender disparity are some of the serious issues facing the education sector of Pakistan. For that reason, main areas of concern for education managers are minimizing gender disparities, providing basic facilities, and providing access to continuous quality education to children, especially to girls, at an approachable distance.

Achievement of long-term and short-term targets rests on effective implementation of a DEP developed using MSP. In education sector, well-timed initiation and effective implementation of a DEP, developed

⁷ The policies that are given the most resources are often called policy priorities. These priorities reflect the goals to which a government is most committed – and they will be reflected in its budget. When a policy is not allocated enough government resources, it is unlikely to have the desired impact. For example, if a policy for improved quality of education does not allocate sufficient resources to increasing the number of teachers, teacher training, and learning materials, then it is unlikely that the quality of education will improve.

using MSP, would help reduce gender gaps, increase enrolment, and lay foundation for development in education sector. This would also assist general public to watch against their interests if needs of their children are not being met properly in schools and if resources are not properly allocated and utilized. Greater involvement of local people in planning and its implementation would make citizen's voice more effective and strong at District and constituency levels.

MSP instrument works as the evidence-base tool that makes district education planning and budgeting more transparent and responsive to local needs. Such planning greatly influences the decision making by ensuring its buy-in and effective implementation through participation of all stakeholders.

In the absence of MSP the budgets, policies and information systems are delinked which ultimately results in weak planning, poor expenditure control, inadequate funding for operations and maintenance, besides poor management and underutilization of available resources. On the other hand, benefits of MSP include: rational allocation of resources to sectors and sub-sectors; equitable distribution of resources to different education levels and functional categories; reduced misappropriation of funds; and effective utilization of available resources. Since the decisions for budget allocations are based on policy priorities and data sources, the tool also contributes to improved transparency and accountability of resources for education.

Another factor, which adds to the importance of MSP, is proper utilization of public finance, which can be done in a more planned way by prioritizing the education issues in a district. MSP is not only a planning but advocacy and accountability tool as well. Prioritization of issues, planned use of public financing, and citizen's oversight helps promote the culture of transparency and accountability in the functioning of district education department.

2.3 Objectives of MSP

The main objective of the MSP is to link education data, policy and budgets in such a manner that the resources are allocated on the basis of clear policy choices to achieve strategic objectives or national goals. District education plans prepared using MSP are aimed to:

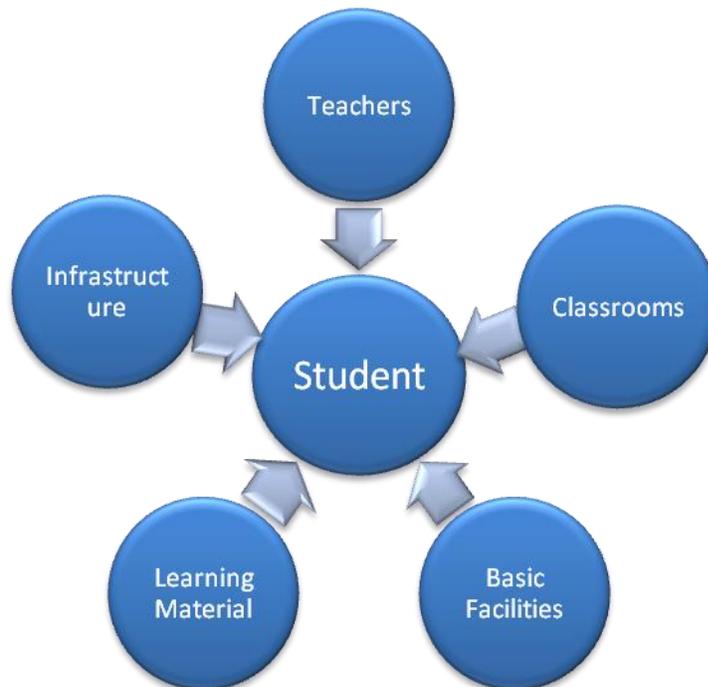

- i) improve the access to continuing education/additional facilities at an approachable distance by setting the annual minimum standard according to the available/ likely to be available resources;
- ii) materialize the national and international commitments made by the government such as Education for All (EFA) goals and Millennium Development Goals (MDGs);
- iii) minimize the existing gender/ rural and urban disparity in GER;
- iv) make optimum use of existing education facilities; and
- v) improve the rate of admission and retention at school level education by providing basic facilities in schools on priority basis.

2.4 Methodology of Minimum Standards Planning

MSP is a student-centered planning technique. All the targets and minimum standards set under MSP are aimed to improve students' access to quality education. Such planning is carried out to ensure that the

minimum standards of quality education set by the government are maintained while devising the agenda to achieve Education for All (EFA) goals. Realizing that students are at the center of all educational inputs and processes, MSP aims to ensure that teaching staff, infrastructure, basic facilities and learning materials are sufficient to enroll and retain all children of school-going age in a district or region.

Figure 1: Student: Basic Unit for MSP

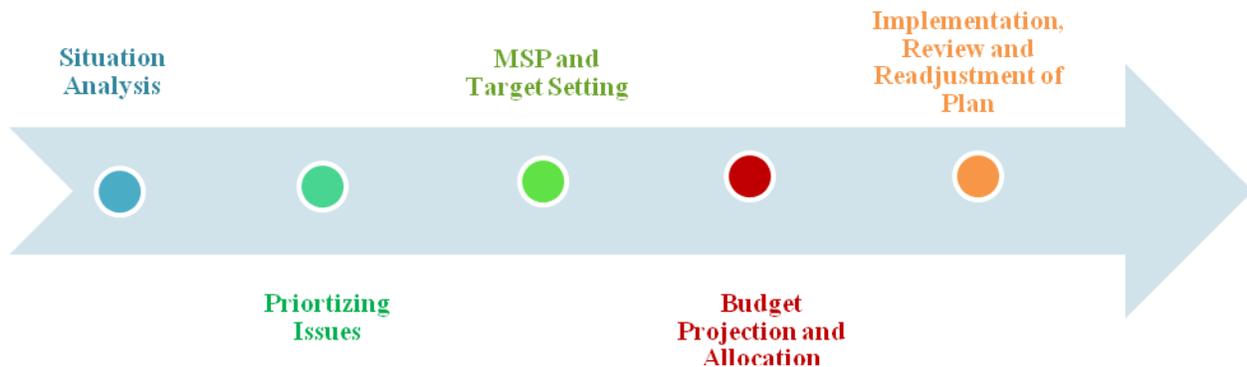

In order to measure sufficiency and adequacy of resources and facilities, the minimum standards and ratios set at the national and provincial level are used during MSP.

For the DEP at hand, students enrolled in schools of district Rahim Yar Khan are the basic unit for setting minimum standard. The plan mainly aims to improve GER in the district.⁸ In order to set targets under the plan, student-teacher and student-classroom ratios set by the government have been used as minimum standards.

For district education managers, MSP is a process followed to develop effective DEP which would achieve optimum balance of needs and demands with the available resources. MSP is not a one-time planning activity; rather it is a continuous process of planning, monitoring and re-adjustment of priorities, targets and resources.

The steps involved in MSP include: situation analysis, prioritizing issues, setting minimum standards and targets, budget projection and allocations, as well as implementation of the plan. (Fig.1).

⁸ The plan at hand mainly aims to improve Gross Enrolment Rate (GER) at the district level. All the calculations in the plan revolve around this aim. If the main target or aim of plan is changed from GER to NER or in terms of percentage targets then the calculations and related goal would be different.

Figure 2: Steps Involved in Minimum Standards Planning (MSP)

Following are the major steps involved in MSP for preparing a district education plan:

i. Situation Analysis to Identify Needs

The very first step in MSP is to identify challenges and needs of schools in the district. These needs can be identified by analyzing the information systems and data-set available with the government. In Pakistan Education Management Information Systems (EMIS) at national, provincial and district levels provide detailed information regarding the facilities, infrastructure and human resources in the schools of each district and region. EMIS and Education Census are the main data sources for education facilities and access related indicators. The data regarding quality related indicators can be accessed from education assessment systems and related departments at provincial and district levels. Situation analysis is an important step as it will help extract useful information from the statistical data which would be vital for setting priorities and targets during consultative planning.

ii. Determine Financial Resource-base

The next step in this planning is to define the total quantum of available financial resources. At provincial level this would include resources available to the sector from revenue at provincial level and donor assistance especially the budgetary support. At district level this would relate to the resource envelop of district education management and education development budget at provincial level. Mapping of financial resources will help determine the availability of funds and keep the planning process realistic.

iii. Prioritization of Challenges and Needs: Consultation and Consensus among Stakeholders

This is the most crucial step and this is where data and policies would feed into target setting and resource allocation. The education sector always faces the challenge of prioritizing competing claims on available scarce resources. Generally, politicized prioritization is a common practice in Pakistan. This is evident from the fact that at provincial level during election years there is a trend of making allocations in the form of block grants. These block grants are neither transparently used nor they can be tracked or assessed for their effective utilization. At district levels the politicians influence decisions regarding transfer and posting of teachers as well as schemes for the provision

of missing facilities and up-gradation of schools. Politicians set priorities and allocate grants and resources to ensure maximum benefit for their key constituencies thus generally ignoring the deprived and under-served areas.

Under MSP, prioritization is based on the needs and priorities identified through available data sources. The priorities are set through a consultative process and policy priorities are used as basis for setting the planning priorities. The policy principles or objectives provide guidance and criteria for prioritizing the schools for allocating resources. This helps address the needs and challenges in a strategic manner thus reducing the duplication or wastage of resources.

iv. Setting the Targets

After setting the priorities the targets to be achieved against each priority are set during the consultative process. The targets for each indicator are set to achieve the main objective of the DEP that is improvement in GER for the plan at hand.

v. Resource Allocation and Utilization

After determining resource envelop, assigning priorities and setting targets, the next step is to allocate financial resources and budgets in a transparent and systematic manner. For example, financial resource-base for provision of missing facilities, such as toilets, in a district informs that the available funds are sufficient for constructing only 100 toilets. In this situation, the policy priorities and available datasets would help in setting the criteria for prioritizing 100 schools for allocating these funds. The policy priority in Pakistan for instance is emphasizing promotion of girls' education. If the data informs that out of total 500 schools with missing toilet facility in a particular district 300 schools are for girls then according to the policy priority these girls' schools will be given priority for allocation.

The stakeholders and policy community can either opt for allocating 100 percent resources to girl schools or they might set ratio of 60 percent and 40 percent for girl schools and boys schools respectively. If 100 percent allocations are made for girls' schools then in the next step, it would be crucial to decide which 100 schools out of these 300 should be given priority. At this stage the data-base and information system can inform about the 100 schools with highest enrolment rate out of these 300 schools. The remaining schools would be accordingly prioritized during planning over the next 3 to 5 years.

In this manner both the policy priorities and information system would be inter-linked and associated with the budgetary process in order to make informed and transparent allocations.

vi. Review and Re-adjustment of Resources according to Changing Policy

Since planning is a continuous process, therefore, priority setting and allocations should be reviewed and re-adjusted during annual budgetary and planning cycle. Tracking of resource utilization and review are essential to ensure timely release and effective utilization of resources. The re-adjustment of priorities and resource allocation is also inevitable if there are significant

changes in the policy priorities or in case an urgent need arises for shifting or re-allocating resources especially in view of emergencies or disasters.

CHAPTER 3

Minimum Standards
Planning for District
Rahim Yar Khan

Minimum Standards Planning for District Rahim Yar Khan

Keeping in view the importance of MSP, a plan has been prepared for education sector of district Rahim Yar Khan. Detailed step-wise description of plan is given below:

3.1 Step One: Situation Analysis

The first step involved in MSP is situation analysis. The situation analysis includes three main areas i.e. i) profile of the district; ii) education statistics and data (access and quality related indicators); and iii) education budget. For district Rahim Yar Khan, detailed situation analysis for education sector has been carried out and various issues have been identified. Identification of issues has been done against indicators of access, quality and equity like number of schools, enrolment (including GER), number of teachers, basic facilities, etc. Details are given below:

3.1.1 Profile of District Rahim Yar Khan

The total area of District Rahim Yar Khan is 11,880 square kilometers (km) with average population density of 399 persons per square kilometer (sq. km). The district comprises four tehsils namely Rahim Yar Khan, Sadiqabad, Liaquatpur and Khanpur, having 122 union councils, three municipal committees and five town committees. It has an estimated population of 4.74 million including 2.3 million females, which are 48.5% of total population.

Out of total population, 1.48 million (31% of the total population) are children of 5-16 years of age in the district, which comprises 51.5% male and 48.5% female population.

As regards out of school children, it is discouraging to note that out of 1.48 million children, 58% children of 5-16 are out of school where number of girls is more than number of boys. In the context of article 25-A⁹ of the constitution of Pakistan, it is responsibility of the provincial government to ensure provision of free and compulsory education to all children of 5-16 years age in District Rahim Yar Khan.

3.1.2 Education Statistics of Rahim Yar Khan

Detailed analysis of education statistics of District Rahim Yar Khan is given here which highlights major issues and challenges in the education sector of the district:

⁹ The Article 25-A states: "The State shall provide free and compulsory education to all children of the age of five to sixteen years in such manner as may be determined by law."

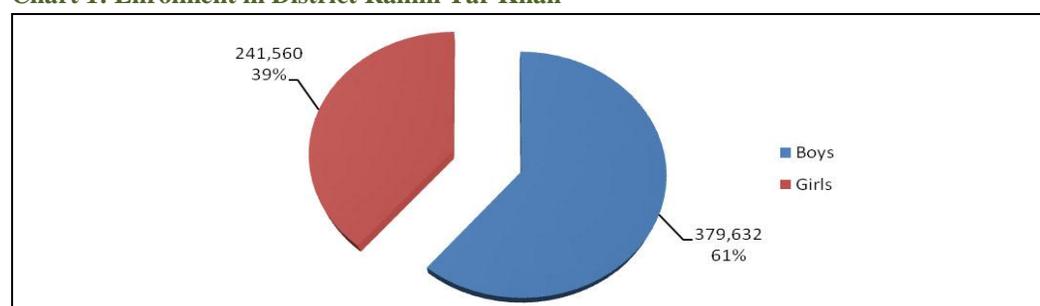

3.1.2.1 Literacy Rate (10+ Population)

In 2010-11, District Rahim Yar Khan has 46% literacy rate as compared to 40% literacy in previous year.¹⁰ Statistics indicate that literacy rate in urban areas is higher than rural areas with visible gender disparity in favour of boys.

3.1.2.2 Enrolment

In District Rahim Yar Khan, out of 1,482,672 children of 5-16 years, 42% children are enrolled in public and private sector schools, where boys outnumber girls' enrolment. See Chart 1 below.

Chart 1: Enrolment in District Rahim Yar Khan

Note: These figures do not include enrolment in katchi class

However, the fact that 861,480 (58%) children of 5-16 years are out of school in the district is most daunting. (Table 1) Gender disaggregation of statistics indicates that out of 861,480 children, 55% girls and 45% boys are out of school, which need to be brought in the education system by providing free and compulsory education.

Table 1: Enrolment and Out of School Children

	Boys	Girls	Total
Enrolment 5-16	379,632	241,560	621,192 ¹¹
Out of School 5-16	383,944	477,536	861,480

Source: District Education Department

In total, 7, 56,239¹² children are enrolled in public and private sector schools at all levels of education. Out of total enrolment, 70% enrolment is in public sector and 30% enrolment is in private sector schools. In both public and private sector schools, boys outnumber girls in terms of enrolment.

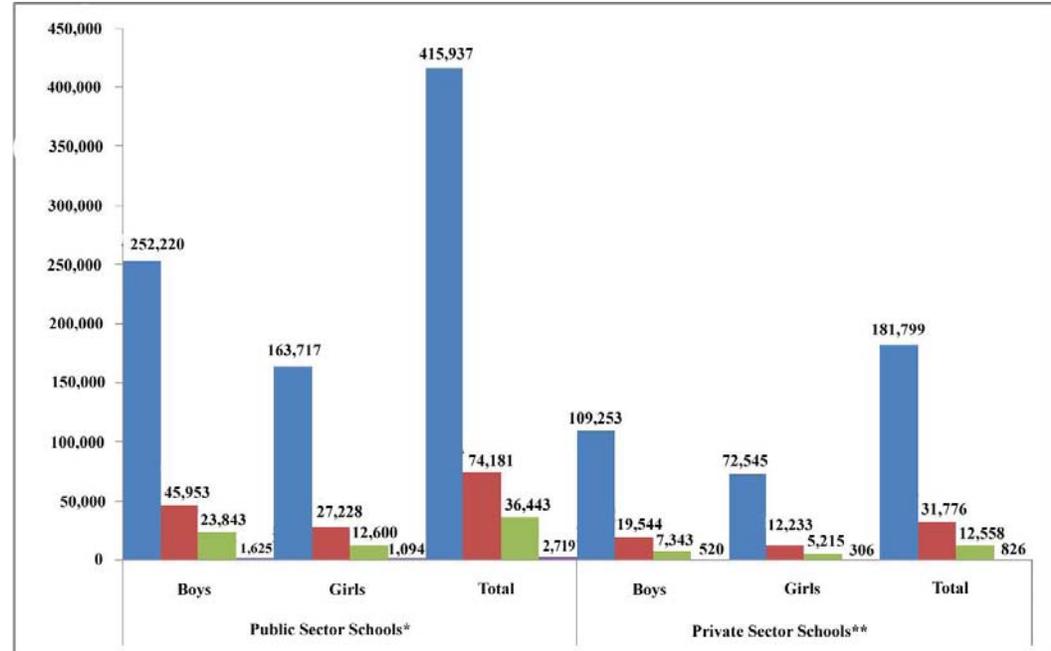

¹⁰ Pakistan Social and Living Standards Measurement (PSLM) Survey 2010-11

¹¹ Excluding higher secondary schools

¹² Including higher secondary school

Out of total 5, 29,280 children enrolled in public sector schools, 61% are boys and 39% are girls. Highest (79%) enrolment is in primary schools, followed by 14% in middle schools, 7% in secondary schools, and 1% in higher secondary schools (Chart 2).

Chart 2: Public and Private Sectors Enrolment in District Rahim Yar Khan

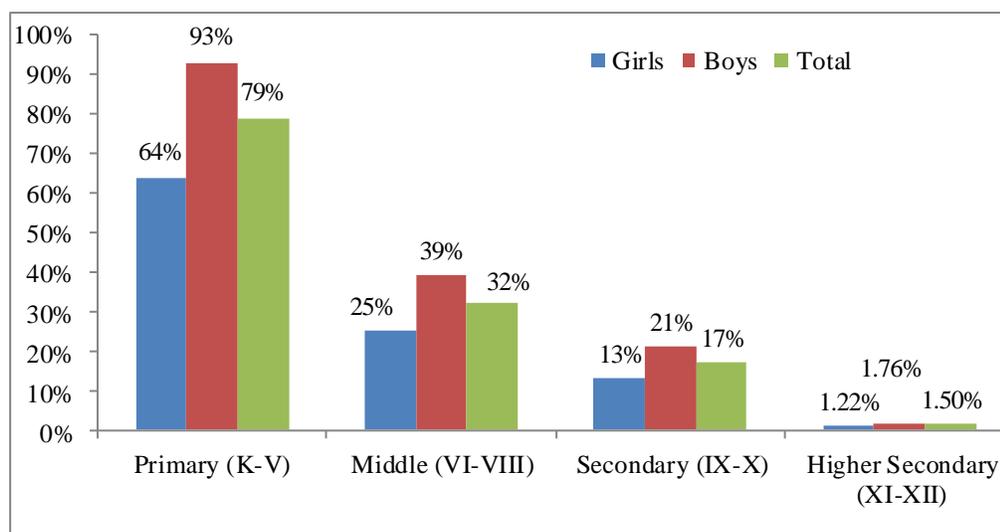

Source: * District Education Department and ** (Estimated form NEC 2005)

3.1.2.3 Gross Enrolment Rate (GER)

In District Rahim Yar Khan, Gross Enrolment Rate (GER)¹³ is 79% at primary (K-V), 32% at middle (VI-VIII), 17% at secondary (IX-X) and 1.50% at higher secondary (XI-XII) (Chart 1). This also indicates that level-wise drop-out rate is high. Gender disaggregated data shows that wider gender gap is visible in level-wise GER, which is in favour of boys.

¹³ **GER Definition:** Total enrolment in a specific level of education, regardless of age, expressed as a percentage of the eligible official school-age population corresponding to the same level of education in a given school year.

Chart 3: Gross Enrolment Rate (GER)

Source: Program Monitoring and Implementation Unit (PMIU) – Punjab

3.1.2.4 Number of Schools

Overall, number of public sector schools is 3,225 in District Rahim Yar Khan, which comprises 53% boys' school and 47% girls' schools. Education level-wise data informs that maximum (83.8%) schools are for primary, followed by 10.8%, 5.1%, and 0.3% schools at middle/elementary, secondary and higher secondary schools, respectively (Table 2). At all levels of education, more schools are available for boys in comparison with girls.

Table 2: Number of Public Sector Schools

Level	Number of Public Sector Schools			
	Boys	Girls	Mix	Total
Primary	1,406	1,296	-	2,702
Middle/Elementary	189	158	-	347
Secondary	115	50	-	165
Higher Secondary	6	5	-	11
Total	1,716	1,509	-	3,225

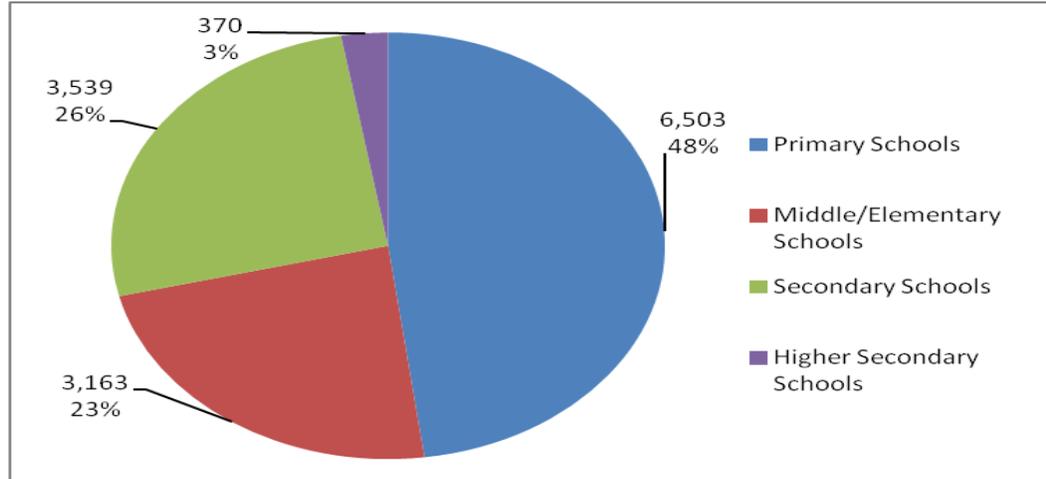

Source: Program Monitoring and Implementation Unit (PMIU)– Punjab

The gender gap increases at higher levels of education especially secondary level where share of girls' schools is 30% only.

3.1.2.5 Number of Teachers

The entire teaching force in District Rahim Yar Khan is 13,575. Out of total teachers, majority (48%) are primary school teachers. This is followed 26% teachers at secondary schools, 23% middle/elementary schools and 3% at higher secondary schools (Chart 4).

Chart 4: Number of Teachers at Each Education Level

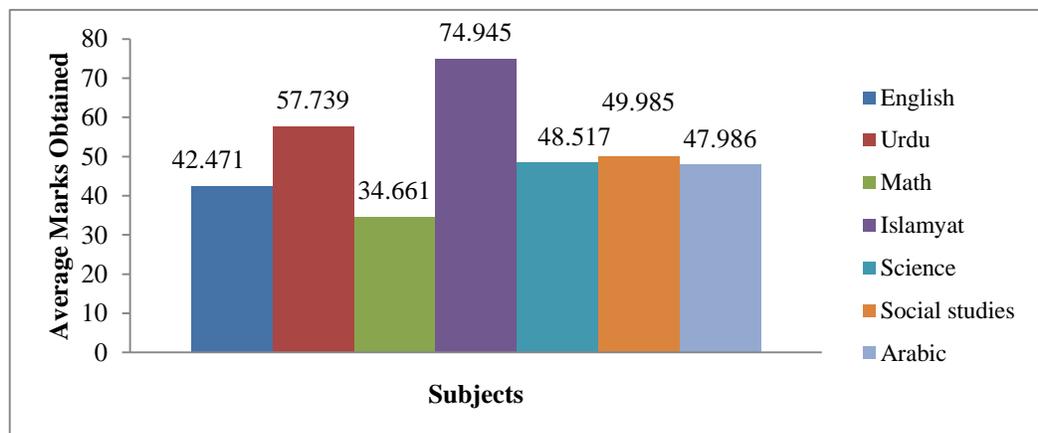

Source: Program Monitoring and Implementation Unit (PMIU) – Punjab

3.1.2.6 Learning Outcomes

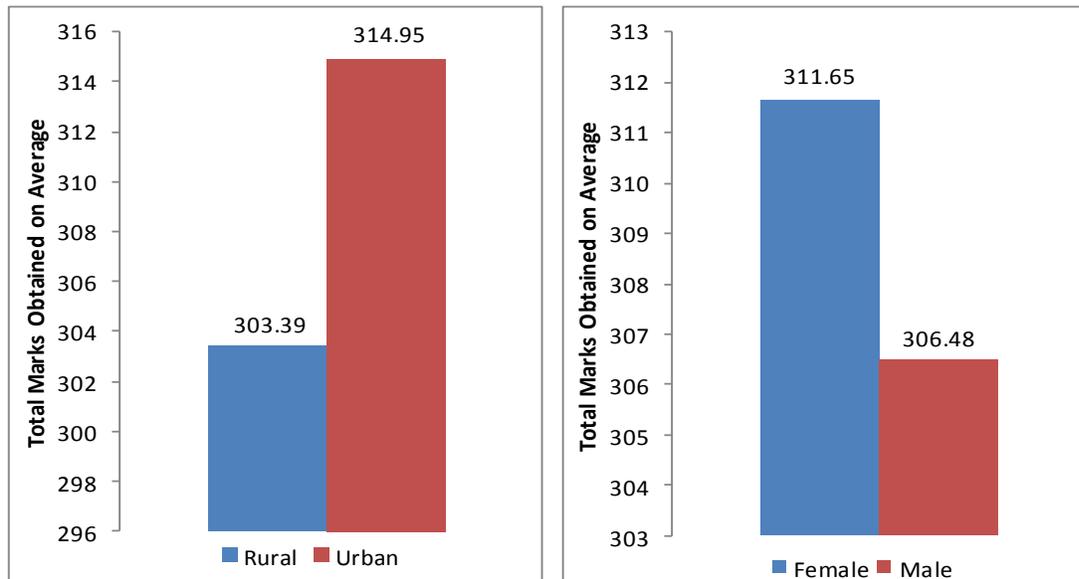

In district Rahim Yar Khan, results of 8th class examination conducted by Punjab Examination Commission (PEC) in 2011, showed that students performed below average in all subjects except Islamyat. The data also indicates that out of total (600) marks in six subjects, (i.e. English, Urdu, Mathematics, Islamyat, Science, Social Studies, and Arabic) students obtained 40-50 marks on average. (Chart 5)

Chart 5: Student Learning Outcome: District Mean on Six Subjects

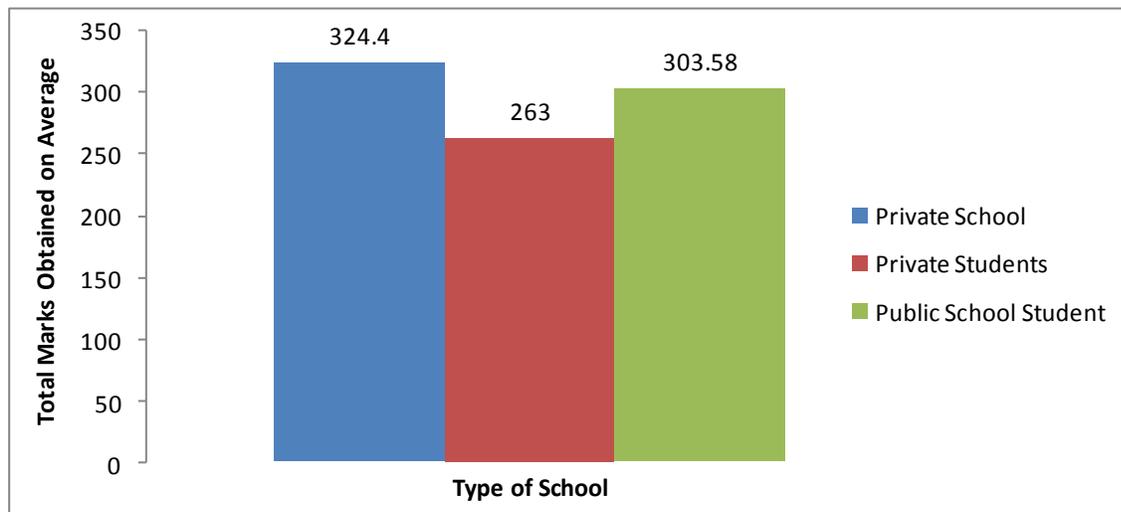

As regards rural-urban divide, a considerable difference can be seen in the total marks obtained by students from rural and urban areas on average (Chart 6). The difference is in favour of urban area as data shows that students from urban areas obtained comparatively better marks compared to students from rural areas. Gender disaggregated data shows that girls scored better than boys on average.

Chart 6: Student Learning Outcome: Urban vs Rural and Boys vs Girls

Data also signifies that students studying in private schools obtained significantly better marks on average than students studying in public schools.

Chart 7: Student Learning Outcome: Public vs Private

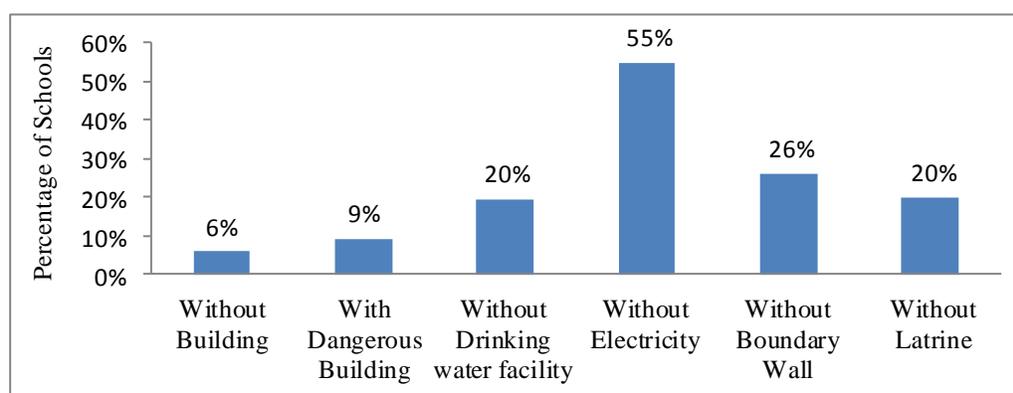

3.1.2.7 Schools without Basic Facilities

Provision of basic amenities, i.e. water, electricity, toilet, boundary walls, fans, and playgrounds, is a pre-requisite for promoting secure and healthy learning environment and increasing enrolment.

Statistics indicate that, out of total public sector schools, majority (55%) of schools are without electricity. This is followed by 26% schools without boundary wall. Almost equal percentage (20%) of schools is without toilet and drinking water facility (Chart 8). Unavailability of basic facilities contributes to low enrolment especially for girls.

Chart 8: Schools without Basic Facilities

Source: Program Monitoring and Implementation Unit (PMIU) – Punjab

During 2012-13, toilet blocks and boundary walls were provided to 16 and 100 schools, respectively, in district Rahim Yar Khan. In addition, 2 additional rooms and 2 new buildings were also provided besides provision of electricity in one school and provision of water in one school (Table 3).

Table 3: Missing Facilities Provided in 2012-13 (Number of Schools)

Renovation	Boundary Wall	Toilet Block	Water Arrangements	Additional Rooms	New Buildings	Electricity Provision
4	100	16	1	2	2	1

Source: Program Monitoring and Implementation Unit (PMIU) Punjab

3.1.3 Education Budget of District Rahim Yar Khan

Total education budget of district Rahim Yar Khan was Rs. 5,275.87 million in 2011-12, which included amount up-to Rs. 604.51 million from provincial government. Total budget comprised of 92% current budget and 8% development budget. (Table 4) This indicates that fewer amounts have been allocated for development projects like construction of new schools, up-gradation of schools, provision of basic facilities, repair and maintenance of schools, etc.

Table 4: Education Budget of District Rahim Yar Khan (2011-12) (Rs. Million)

Total Education Budget	5,275.87
Current Education Budget	4,851.40
Development Education Budget	424.47

Source: District Education Budget Books (2011-12)

3.1.3.1 Current Education Budget

In total, Rs. 4,851 million have been allocated for education under current budget. This includes Rs. 275.04 million grants from provincial government. Out of total district current education budget (Rs. 4,576.36 Million), major chunk (Rs. 4,514.71 million) goes to salaries, i.e. 99% of the current district education budget. The share of non-salary budget should be at least 12% of the total current budget.¹⁴ However, the amount allocated for non-salary costs are only 1% of the current district education budget in Rahim Yar Khan (Table 5).

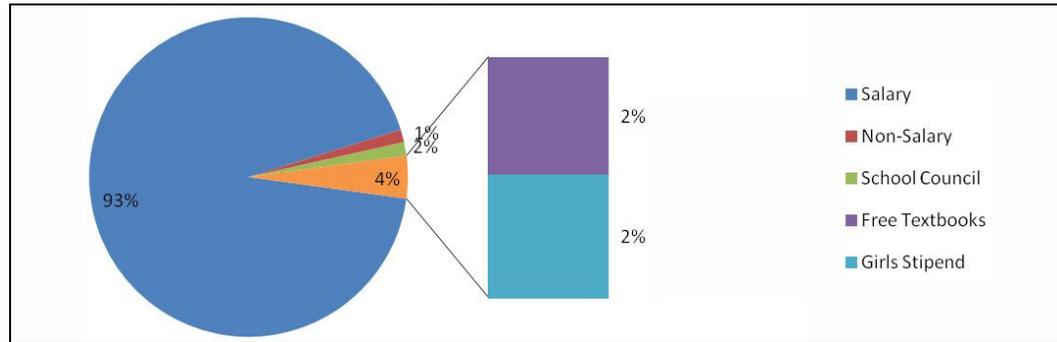

Table 5: Current Education Budget of District Rahim Yar Khan (2011-12) (Rs. Million)

District School Education (Current Budget)	4,576.36
Salary	4,514.71
Non-Salary	61.65
School Council	65.52
Free Textbooks	102.91
Girls Stipend	106.61
Total Current Budget (Educational Institutions and Administration)	4,851.40

Source: District Education Budget Book (2011-12)

Non-salary budget includes operational costs which are mainly expended on utilities (mainly electricity) leaving negligible amount for teaching-learning activities i.e. classroom consumables, petty repairs, gardening and co-curricular activities. (Table 5)

¹⁴ Medium Term Development Framework (MTDF)

Chart 9: Composition of District Budget (Education Institutions and Administration)

As regards share of budget from provincial government, Rs. 106.61 million is for girls' stipend, Rs. 102.91 million for free textbooks, and Rs. 65.52 million for school councils (Table 5 and Chart 9).

3.1.3.2 Development Education Budget

Total development budget of the district is Rs. 424.47 million, which includes Rs. 329.47 million from provincial government. The district development budget is only Rs. 95 million (Table 6).

Table 6: Development Education Budget of District Rahim Yar Khan (2011-12) (Rs. Million)

Development (District Budget)	95.00
Development (Provincial Budget)	329.47
Total Development Budget (Provincial + District)	424.47

Source: District Education Budget Books (2011-12)

3.2 Step Two: Priority Setting

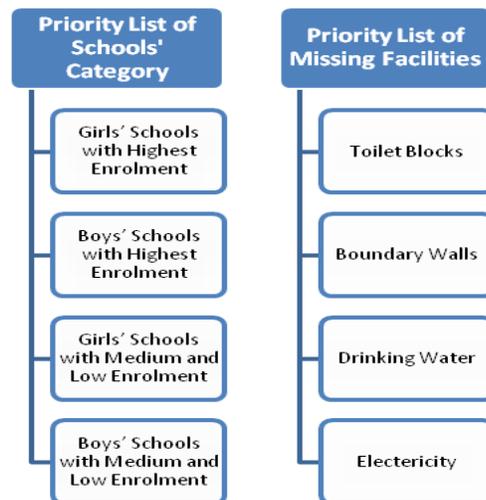

In order to set the priorities a consultative meeting was conducted with education sector stakeholders at District Rahim Yar Khan. Participants of the consultative meeting included officials from District Education Department Rahim Yar Khan, members of school councils, representatives of local CSOs as well as representatives and workers of political parties. During the consultative meeting situation of education indicators and budgets was shared with the stakeholders. Participants of the meeting enlisted provision of classrooms and missing facilities in schools as priority areas to invest for improving enrolment and retention in schools.

Basic facilities are an important factor influencing enrolment especially girls' enrolment. Situation analysis informs that a large number of schools in Rahim Yar Khan are without basic facilities with

limited fiscal space to deal with the issue. Planning exercise during consultative meeting focused on prioritizing the problem in order to provide missing facilities in all schools of District Rahim Yar Khan over next five years. The planning was carried out keeping in view the available fiscal space of the district.

The education data of the district informs that despite availability of more girls' schools, female enrolment in the district is less than boys. In view of the situation and considering that girls' education is a policy priority, the stakeholders during the planning exercise decided to assign priority to girls' schools for provision of classrooms and basic facilities. Within the group of girls' schools priority was assigned to the schools with highest enrolment. While prioritizing the facilities to be provided on urgent basis, it was decided that toilet blocks and boundary walls will be constructed on priority. This priority was assigned in view of the cultural and social barriers as well as security concerns of the parents. It was decided that provision of toilet blocks and boundary walls will be followed by provision of water and electricity facilities.

Figure 3: Priority Lists for Schools and Basic Facilities

3.3 Step Three: Target Setting and Planning based on Minimum Standards

After setting the priorities, realistic and achievable targets were set against each challenge and issue highlighted during situation analysis. The current situation of various indicators and facilities was taken as the baseline against which annual targets were set for provision of schools, teachers, additional classrooms and missing facilities ultimately contributing towards improvement in enrolment and retention in schools.

Planning was carried out to achieve the targets gradually over next five years. In order to set annual targets minimum standards of Student-Teacher Ratio (STR) and Classroom-Student Ratio (SCR) as announced by the government were followed. Student teacher ratio (STR) is one of the most common indicators used in planning.

The ratio is used to measure the level of qualified human resource (teachers) required to meet demands of each grade. If the standard ratio is maintained it helps provide enabling environment for quality education. The ratio also helps identify schools with over-supply and under-supply of teachers thus highlighting system inefficiencies. Similarly, provision of adequate classrooms is also essential to ensure effective learning environment for students.

Details of the targets set for enrolment, number of schools, teachers, classrooms and basic facilities are provided hereunder:

3.3.1 Enrolment Targets and Annual Planning

The plan targets to enroll 1,130,684 children in public and private schools at all levels of education by 2017-18. The target has been set against the baseline of 824,999 children currently enrolled in public and private institutes of the district. Population projection of the district for next five years has also been factored-in while planning and targeting the increase in enrolment.

Table 7: Enrolment by Stage (2017-18)

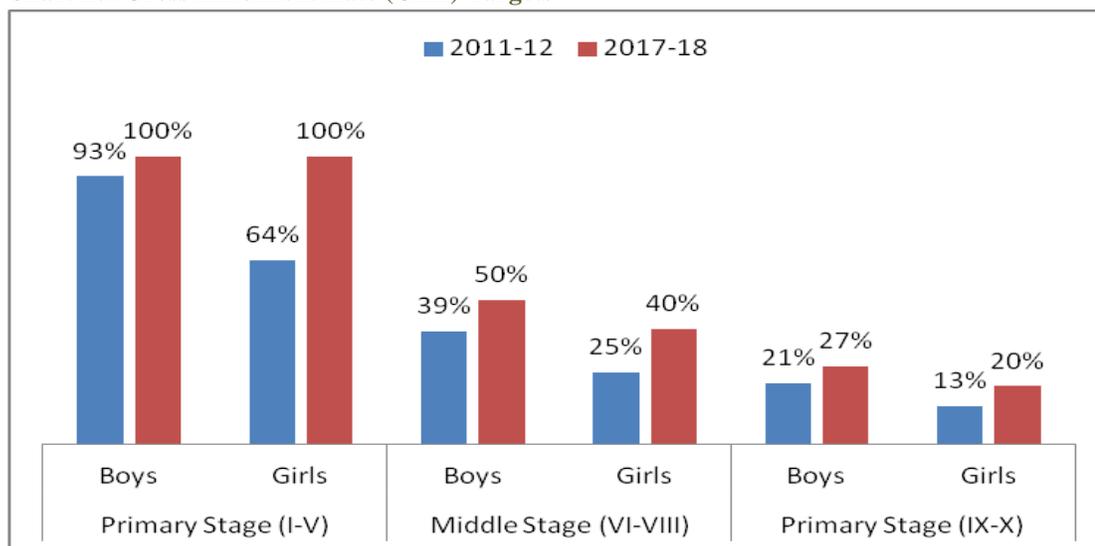

Total Enrolment	1,130,684
Primary Stage (Total)	872,409
Boys	444,928
Girls	427,480
Middle Stage(Total)	174,869
Boys	98,873
Girls	75,996
Secondary Stage(Total)	77,427
Boys	45,234
Girls	32,193
Higher Secondary Stage	5,979
Boys	3,076
Girls	2,903

The enrolment baseline and planned target (1,130,684) include children of said 5-16 years of age from private, public and other streams of education. The plan, however, provides targets for the additional classrooms, teachers and infrastructure for only the public education and the enrolments in the Public Schools.

Highest (872,409) enrolment has been targeted at primary stage, followed by middle, secondary, and higher secondary stages (Table 7 above). Detailed year-wise targets are provided in the table given as Annexure I.

In district Rahim Yar Khan, target has been set to achieve 100% GER (against baseline of 79%) at primary stage by 2017-18. For middle and secondary stages, the target is 45% (against baseline of 32%) and 24% (against baseline of 17%), respectively (Chart 10).

Chart 10: Gross Enrolment Rate (GER) Targets

3.3.2 Number of Schools

In order to achieve the target of 100% GER, district Rahim Yar Khan needs 3,378 schools by 2017-18. Currently there are 3225 schools in the district and in order to achieve the target there is need to up-grade and include 153 schools till 2017-18. Details of targets at each education level are given in Table 8.

Table 8: Number of Institutions – Target (2017-18)

Primary School	2011-12	2017-18
		2,702
Boys	1,406	1,380
Girls	1,296	1,322
Elementary/Middle School (Total)	347	418
Boys	189	203
Girls	158	215
Secondary School (Total)	165	240
Boys	115	150
Girls	50	90
Higher Secondary School (Total)	11	18
Boys	6	9
Girls	5	9
Total Public Sector Educational Institutions	3,225	3,378
Boys	1,716	1,742
Girls	1,509	1,636

Year-wise targets for increasing number of school including both new schools and up-graded schools at each education level are provided in the Table 9.

Table 9: Year-wise Target for Number of Additional Institutions

	2013-14	2014-15	2015-16	2016-17	2017-18	Total
Primary Schools	0	0	0	0	0	0
Middle Schools	14	14	14	14	15	71
Secondary Schools	15	15	15	15	15	75
Higher Secondary Schools	1	1	1	2	2	7
Grand Total	30	30	30	31	32	153

Highest number of schools (75) would be required at secondary level, followed by 71 schools at elementary/middle level till 2017-18.

3.3.3 Number of Teachers

In order to meet above mentioned enrolment targets set for district Rahim Yar Khan, 19,772 teachers will be required by 2017-18. In baseline year i.e. 2011-12 there were 14,745 teachers in district Rahim Yar Khan and in order to achieve target set for year 2017-18 there is need to induct 5,032 more teachers in the system over next five years. Year-wise target for the induction of teachers is given in Table 10.

Table 10: Number of School Teachers

	2013-14	2014-15	2015-16	2016-17	2017-18
Target for Total School Teachers Each Year	15,721	16,715	17,722	18,742	19,772
Additional Teachers Required Each Year	976	995	1,008	1,020	1,032

In line with the national standard set for Student-Teacher Ratio (STR), the annual increase under the plan in number of teachers is intended to keep the STR at 40:1. Education level-wise targets for inducting teachers each year are given in Table 11.

Table 11: Education Level-wise Target for Additional School Teachers

	2013-14	2014-15	2015-16	2016-17	2017-18
Primary School	482	511	436	601	445
Middle School	74	170	236	116	237
High School	391	298	306	309	316
Higher Secondary	28	15	30	-6	34
Total	976	995	1008	1020	1032

3.3.4 Basic Facilities

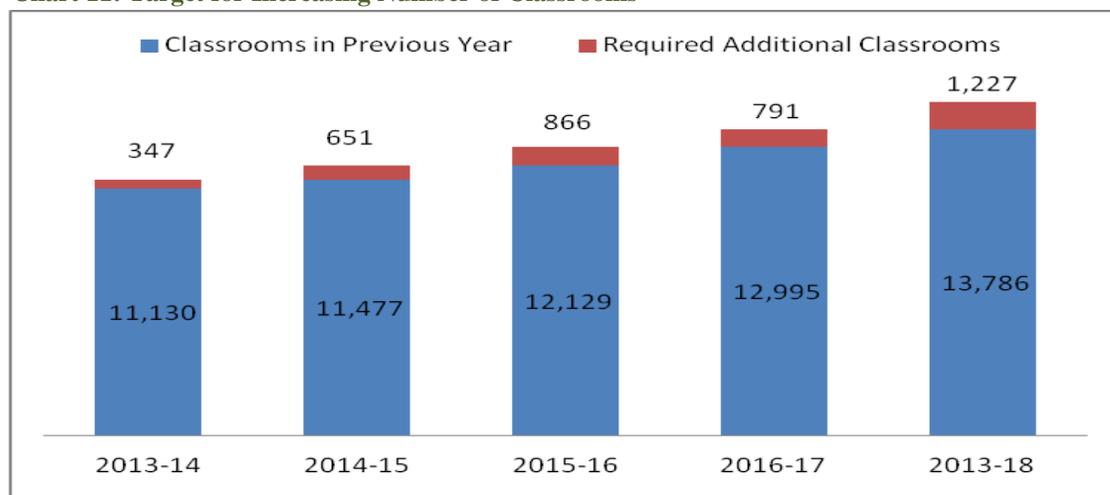

During the target setting exercise education sector stakeholders and district education managers of Rahim Yar Khan assigned priority to two basic facilities i.e. boundary walls and toilet blocks for minimizing the backlog of missing facilities in the public sector schools of the district. The criterion for selection and order of preference of schools for the provision of missing facilities has been primarily geared towards improving girls' access to schools at all levels of education.

Considering the situation of missing facilities and priorities set by stakeholders the plan envisages providing toilet blocks and boundary walls to 38 schools and 39 schools, respectively, in 2013-14. List of schools selected according to predetermined criteria, is give attached with the document from Annex II to Annexure VII. For record and transparency, Education Management Information System (EMIS) codes and names of selected schools are also mentioned in the annexed lists. Planning has also been carried out to provide all basic facilities in all schools of the district in period of five years from the baseline.

3.3.5 Provision of Classrooms

In district Rahim Yar Khan a significant number of schools have Student-Classroom Ratio (SCR) above 135. In order to address the issue of high SCR a total of 3,883 additional classrooms will be required till 2017-18. In the year 2012-13 there were 11,130 classrooms in all public schools of district Rahim Yar Khan. In order to improve SCR a total of 15,013 classrooms will be required by 2017-18. Planning and target for total number of schools in a year and additional classrooms required next year are described in chart 11 below:

Chart 11: Target for Increasing Number of Classrooms

The plan has been prepared and target set to provide new classrooms in the schools with very high SCR in the district. In total 83 classrooms will be required in primary schools during

2013-14. Year-wise target for provision of additional classrooms at each education level are given below.

Table 12: Year-wise Target for Number of Classrooms required at each Education Level

	2013-14	2014-15	2015-16	2016-17	2017-18
Primary Schools	81	215	119	147	572
Middle Schools	59	59	382	257	261
High Schools	137	353	337	355	361
Higher Secondary	71	23	27	32	33
Total Additional lassrooms	347	651	866	791	1227

3.4 Step Four: Budget Required for Achieving the Targets

In total, Rs. 48.29 billion are required to achieve the targets set in the minimum standards plan of district Rahim Yar Khan described above. It comprises of 91% current budget and 9% development budget (Table 13).

Table 13: Budget Required to Achieve the Targets Envisaged in the Plan (2013-18)

Required Current Financial Resources 2013-18 (In Rs. million)	41,669.73
Required Developmental Budget	6,622.01
Total Financial Requirement (Current + Development)	48,291.74

Detailed year-wise budget projection is attached as Annexure VIII.

Annexure I: Provision of Toilet Blocks to Schools (2013-14)

Stage/Gender	Public												Private												Public+ Private																	
	2011-12		2012-13		2013-14		2014-15		2015-16		2016-17		2017-18		2011-12		2012-13		2013-14		2014-15		2015-16		2016-17		2017-18		2011-12		2012-13		2013-14		2014-15		2015-16		2016-17		2017-18
